words, what happens at encoding?

0 / 1 point

in token

the sequence

ing ends

at lengths, how do you ensure that they are understood when fed into a neural network?

1 / 1 point

the `tensorflow.keras.preprocessing.sequence` namespace

th using the `pad_sequences` method of the tokenizer

neural Network using the `pad_sequences` property

work to expect different sizes with `dynamic_length`

at length, and call `pad_sequences` on them, what's the default result?

1 / 1 point

gest sequence by adding zeros to the end of shorter ones

gest sequence by adding zeros to the beginning of shorter ones

ortest sequence

ding to be at the end of the sequence, how do you do it?

1 / 1 point

then initializing it

ences object, passing it 'after'

then initializing it

ences object, passing it 'post'
